EXECUTIVE SUMMARY

Computer Science graduate with a strong foundation in cloud-based systems, and DevOps practices. Hands-on experience with Azure, CI/CD and Docker through academic and project work, with a focus on automation, deployment strategy, and continuous improvement. Motivated to collaborate with cross-functional teams to improve release management, reliability, and scalable cloud delivery.

INTERNSHIP

Python Developer Intern

Infosys Springboard

Nov 2025 – Jan 2026

Remote

- Directed ML strategy backtesting for historical time-series trading models, improving validation responsibility, documenting engineering outcomes, and aligning delivery planning
- Architected FastAPI backend APIs for dashboard systems, strengthening software integration, version control discipline, and dependable service implementation
- Partnered on code reviews and troubleshooting to improve testing quality, production security, and maintenance support across the repository
- Supported sprint planning and Agile activity by coordinating task updates, improving team productivity, and reinforcing delivery responsibility across the internship workflow

SKILLS

- **Programming & Development:** Python, Django, Shell Scripting
- **DevOps Tools:** Git, Docker, Jenkins (CI/CD), Azure DevOps, GitHub Actions
- **Cloud Services:** Microsoft Azure (VM, Blob & Queue Storage, VNet, NSG, ACR, Load Balancer, Azure Functions)
- **Core Concepts:** SDLC, Version Control, CI/CD, Virtualization, Containerization

EDUCATION

Velalar College of Engineering and Technology

Bachelor of Engineering - Computer Science; GPA: 9.43

Tamilnadu, India

Nov 2022 - May 2026

PROJECTS

• Secure Cloud File Vault (Python, Django, Azure)

[GitHub](#)

- Architected a Django file management application on Azure Blob Storage to keep the platform cloud based, stateless, and resilient across VM lifecycle changes
- Implemented Azure Queue Storage provisioning to decouple upload requests from post-processing, with a separate worker process consuming events asynchronously
- Deployed the application to an Azure VM within a custom VNet with hardened NSG rules for secure access and enhanced disaster recovery, while containerizing it with Docker and publishing versioned images to Azure Container Registry (ACR).

• Springboot App CI/CD (Git, Jenkins, Docker)

[GitHub](#)

- Designed and implemented a multi-stage Jenkins pipeline (build, test, package, deploy) for a Spring Boot application, automating the full release process from commit to deployment
- Containerized the application using Docker to ensure consistent behavior across development and deployment environments, eliminating "works on my machine" issues
- Streamlined code integration and deployment through automated triggers, reducing manual effort and improving release reliability

• Azure DevOps Automation (Azure Pipelines, Kubernetes, Azure Container Registry)

[GitHub](#)

- Implemented CI/CD for a multi-microservice voting application using Azure Pipelines, coordinating build and deployment across independently versioned services
- Containerized services with Docker, pushed versioned images to Azure Container Registry (ACR), and adopted GitOps-based deployments to Kubernetes using ArgoCD for declarative, auditable releases
- Reduced deployment time by 60% and improved release frequency by 2x through automated workflows, monitoring, and optimisation, cutting manual intervention in the release process

ACHIEVEMENTS

- **Animate 2024 by IIT Bombay (Winner):** Created a 2D animated video highlighting India's advancements in navigation; awarded consolation prize
- **Dark Patterns Buster Hackathon by IIT BHU (Finalist):** Designed system architecture for a browser extension detecting 10+ dark patterns, helping safeguard over 2,000 users from potential scams.
